

8.4 C3 projection: NOT PERFORMED

x image-space M0/M1/M2 anchors

Dryad status: not_provided. No other accessible dataset provides images labelled M0/M1/M2, and substituting a different label set - BBBC054's microglial morphology classes - and presenting it as this analysis would misrepresent what was measured.

x an omics anchor whose stimulus matches an image label

anchor statuses: {'IFNg': 'ok', 'IL4': 'failed_sanity_rule', 'LPS': 'cannot_form_anchor'}. The LPS anchor cannot be formed (2 donor-matched pairs, minimum 3) and the IL-4 anchor fails its canonical-marker sanity rule, so neither stimulus 8.4 names survives. The only usable anchor is ['IFNg'], whose stimulus has no counterpart among the specified image labels.

v0's one-axis substitute is DELETED as circular (PLAN_v1 8.5)
